

Not the exactly same

Hello everyone,

Kunj Purvish Shah goes by Kunj although people may use any name when addressing him. I come from India while studying Computer Science at university where my pronouns consist of he/him/his.

I am completely infatuated with my exploration of machine learning which started not too long ago. I spend much time constructing models while studying the vast industrial effects that machine learning creates. These systems use ML technology including ChatGPT and Netflix recommendation engines along with face recognition for device security and assistants powered by Alexa while self-driving vehicles from Waymo make up another example. Modern technology interacts with humans differently because this field continues to transform the user experience.

Among all the possible objects in Beauty & the Beasted I would prefer to be a smart speaker such as Alexa or Google Assistant. Why? The smart speaker shows its beauty in its universal usefulness and simultaneously fights like a beast through its ability to retrieve vast internet information. Smart speakers combine the characteristics of being an approachable friend and an information database that is powerful at the same time.

I would choose burrito bowls as my one-food choice for eternal eating because they combine health with versatility and offer the perfect addition of guacamole. Why? A burrito bowl offers a great nutritional value combined with effortless adaptability without demanding any spiciness to achieve its deliciousness. The burrito bowl stands out with guacamole on top because it offers superior tastiness to all food combinations.

Currently I feel strongly positive about the educational path I follow since it involves researching AI technology and operating smart speakers and eating burrito bowls. My appreciation goes to all listeners for their attention together with my excitement for what comes next.
